## 22 Years and still going strong!

**J&S Laser Profiles are looking forward to celebrating 22 years in business in January 2010.**

Providing a full fabrication service based in Totton, Southampton since 1988, the company continues to flourish in today's demanding laser profiling industry. With professional laser cutting, punching, folding and welding facilities in-house, J&S Laser Profiles will complete the job accurately and on time whether creating an intricate one-off prototype or large batch work.

Owners and directors, Mark Stancombe and Brian Jackman, are proud to provide a service that is quick, accurate and competitively priced, and if components are needed in a hurry the company offer night-shift and 'lights-out' production.

As "time-served" sheet metal workers, having both served apprenticeships within the Aircraft industry in Southampton during the 1970's, Mark and Brian are involved throughout each project. With many years experience behind them, in laser cutting, punching, folding and welding, they oversee their own team of eleven highly skilled profilers and coded welders, ensuring all fabrication work is completed to the highest standard.

Difficult profiling with fine detail and tight tolerances are an everyday achievement for J&S Laser Profiles, creating components for infinite purposes down to 0.1mm tolerances, attainable only with state-of-the-art machinery and highly skilled workmanship. Mark Stancombe states, "Awkward work is our speciality! A recent project involved creating slots and holes closely tied up to a very tight tolerance of 0.1mm ... We completed the job with lasering, folding and welding it in-house".

Serving the aircraft, medical, engineering and shopfitting industries, J & S Laser Profiles' expertise includes punching, folding, design, finishing and painting treatments. By providing a complete CNC laser cutting service in-house, they can be flexible to your needs and they offer a quick turn-around and accurate profiling at competitive prices.
